## INSTRUCTION TO SUPERVISORS

### PAPER 2

The Practical paper requires knowledge of Mortice and tenon joints, dovetail joints, housing joints and bridle joints.

### ADVANCE INFORMATION

All materials for the practical test are to be supplied by the school. Supervisors should endeavour to obtain the materials specified. Where this is not possible, the supervisor is required to enclose with test pieces a list of the alternative sizes supplied.

In addition to the usual bench kit the following tools will be required.

Per Candidate

1 × 6 **mm** chisel

2 × 13 **mm** chisel

Per 4 candidates

1 sliding bevel / dovetail template

1 jack / smoothing plane

1 coping saw

1 spoke shave (round and flat)

1 bond saw / jig saw

1 morticer

**NB:** The paper requires candidates to identify and make one missing joint based on their own measurements. During this process, candidates must ensure they do not repeat any joint that has already been used.

Each candidate is to be supplied with the materials listed below. The wood, which should be mild working straight grained such as candidates are accustomed to using, must be planned and one end shot. This work is to be carried out by candidates prior to the examination.

|                |               |
|----------------|---------------|
| Piece <b>A</b> | 200 × 60 × 20 |
| Piece <b>B</b> | 210 × 60 × 20 |
| Piece <b>C</b> | 140 × 60 × 20 |
| Piece <b>D</b> | 140 × 40 × 20 |
| Piece <b>E</b> | 140 × 35 × 20 |

All measurements are in millimetres

For those using machines ensure that all pieces are initially cut to safe length of **305 mm**.

Then trim each piece to the final dimensions as specified in the working drawing.

**GENERAL NOTES**

In order to ensure that candidate have equal opportunity, a check should be made before the examination that all pieces of wood are of acceptable quality.

No assistance or information other than that printed in the examination paper is to be given to the candidate nor may they be allowed a second supply of wood during the examination.

At the end of the examination the invigilator is to carry out the following:

1. Ensure that the name and candidate number are clearly and correctly marked on each of the candidate's pieces of work. If a candidate does not complete the test, he/she must however return all of the wood supplied with the exception of waste.
2. Enter the following required details on an answer envelope reading pieces of work for scripts and complete the attendance register. No work should be put inside this envelope.
3. Pack the finished piece of work securely in the plastic bag and send them together with the envelope containing attendance register to ZIMSEC.
