

STAGES IN THE EXECUTION OF A FULLY-FLEDGED SCHOOL BASED PROJECT

*Project activities shall be done in stages and will be iterative to allow adjustments and readjustments as pupils get feedback from the teacher, peers and even from parents or guardians. Progressive scoring guides and learner progress report shall be used in every stage of project execution and marks shall be awarded based on the Progressive Scoring guide that will be provided. The model hereto illustrated is most applicable to Junior and Secondary School Modules.

Stage 1: Problem Identification

This is a stage where each pupil under the supervision of the teacher identifies and defines a specific issue, innovation or challenge that he or she wants to address.

The activities to be carried out include:

- problem description
- a brief statement of intent on how he or she intends to solve the problem
- stating the main idea as a theme or topic
- clearly stating the design specifications, being a set of requirements to be satisfied by the material, product, or service after the whole project process

Stage 2: Investigation of related ideas

Pupils with the guidance of their teachers carry out a research or investigation on the current situation of the identified problem to find out existing solutions that might solve or related to the problem, situation, passion, interest or intended innovation.

Activities include where pupils:

- search for information on related existing ideas that might be an intervention to the problem or situation using various methods including drawings, illustrations, pictures, audio – visuals, performances, writings and objects
- analyse each item on whether it will solve the problem by considering its strengths and weaknesses and proffer recommendations

Stage 3: Generation of Ideas

Pupils create their own possible ideas to solve the problem.

Activities at this ideation stage include pupils:

- modifying existing solutions as per the researches in stage 2 if necessary ● creating new ideas to solve the problem
- analysing the possible ideas created through experimenting and testing
- presenting the possible solutions using drawings, illustrations, pictures, audio–visuals, and performances among others
- analysing, synthesising and establishing connections and relationships.

Stage 4: Development of Idea

Pupils choose the best possible solution or idea generated in stage 3. The chosen idea will have the most impact as an intervention to the problem, situation or innovation.

After selection pupils will:

- refine or develop the chosen idea to ensure it meets the design specifications stated in stage 1
continue to analyse and synthesise information as they improve the idea
- experiment and test refined idea through the production of mock ups, demonstrations, drawings, performances, audio - visuals and other forms of presentations

Stage 5: Presentation of Results

Pupils present final solutions (goods and services) in the form of drawings, artefacts, portfolios, flyers and banners, demonstrations, performances, audio and visuals, write-ups, and musical pieces, among others.

Stage 6: Evaluation and Recommendations

At this last stage, pupils' activities include:

- comments on achievements, and challenges faced in coming up with the product, linking to the statement of intent and design specifications
- recommendations for further improvement of the solution, and related ideas and issues to be considered in the future
